

SaTQuML 2026

Secure and Trustworthy Quantum Machine Learning

Advancing secure and trustworthy QML for resilient quantum AI in adversarial and security-critical settings.

December 12–13, 2026

SaTQuML@gmail.com

Why SaTQuML

Quantum machine learning is moving toward hybrid and cloud-accessible systems, yet its security, reliability, and practical value remain insufficiently understood. SaTQuML brings together QML, cybersecurity, trustworthy AI, and quantum-security communities to advance rigorous threat models, benchmarks, and deployment practices for security-critical applications.

Topics of Interest

Trustworthy QML Systems

Robustness, privacy, reliability, interpretability, model leakage, adversarial behavior, hardware noise, and distribution shift.

Rigorous Benchmarks & Evaluation

Realistic datasets and threat models; strong classical, quantum, and quantum-inspired baselines; reproducibility, ablations, and negative results.

QML for Cyberdefense

Intrusion and anomaly detection, malware analysis, fraud and phishing detection, cyber-physical security, vulnerability prioritization, and threat intelligence.

Secure QML Deployment

Secure training and inference across cloud, edge, quantum-cloud, and hybrid systems; remote access, data exposure, and pipeline risks.

IMPORTANT DATES

Portal opens

August 15, 2026 (AoE)

Submission deadline

August 29, 2026 (AoE)

Acceptance notification

September 29, 2026 (AoE)

Camera-ready deadline

October 15, 2026 (AoE)

Keynotes

Swaroop Ghosh

Pennsylvania State University

Muhammad Usman

CSIRO

Samuel Yen-Chi Chen

Wells Fargo

Juan Cruz-Benito

IBM Quantum and IBM Research

Soohyun Park

Sookmyung Women's University

Panelists

Jean Utke

Allstate

Kanad Basu

Rensselaer Polytechnic Institute

Aakash Kolekar

Senior AI Research Scientist, Amazon AI

Submission Tracks

Long: 9 pages • **Short:** 4 pages • **Tiny:** 2 pages

Page limits exclude references and supplementary material.

Submission Information

Review: Double-blind and non-archival.

Format: Anonymized submissions must use the official [NeurIPS 2026 LaTeX style](#).
